# Citrix Optimisation for Microsoft Teams

The challenge

Audio and visual quality is key for allowing users to collaborate well through Teams. However, dealing with such intensive files can affect voice and video quality as well as responsiveness while screen sharing.

The solution

Citrix Teams optimisation gives your employees a solution that helps them be more productive. And your IT team will also get the added benefit of centralised management and control.

Moreover, because information such as data and chat logs stay in a cloud environment and are not stored on native devices, you're ensuring better control over sensitive information.

How does Citrix optimisation for Teams work?

With Citrix optimisation, the processing is offloaded from the server to the client, therefore boosting performance significantly.

This gives the user improved interactivity and session responsiveness, as well as a better quality of call, wherever they are.

And by moving the heavy lifting from the datacentre to the endpoints, Citrix Teams optimisation can help reduce compute costs considerably while allowing increased scalability within your Citrix environment.

How do I enable Citrix Teams optimisation for my business?

HDX optimisation for Microsoft Teams is fully native to Citrix Virtual Apps and Desktops. And the Citrix Workspace app also has a built-in multi-platform HDX Media Engine that ensures optimised device and media handling, with audio, video, and screen sharing offloaded to the user's device.

If you already have Citrix deployed within your environment, we can help you optimise your Teams regardless of whether your data is held on-premises or in the cloud.

If you are not currently using Citrix, our experts can advise you on the most suitable solution for your business.

Unlock the full of potential of Citrix with Evros today

As a Citrix Partner and Gold Solution Advisor, we have the product-specific technical expertise to provide you with a secure digital solution, so you can manage your environment, no matter how large or complex.

With flexible working as the future, Teams is integral to enabling collaborative working going forwards. And if your business is using Teams inside a Citrix environment, it's important to ensure that it is optimised to reduce CPU requirements as well as improve the user experience. In this video, Evros Citrix Consultant, Anthony Green, demonstrates the benefits of Teams optimisation within Citrix.
